Hello:

With regards to the my proposal to more or less put some limited controls back on the sellers of various Commerical Type of Radio Communications Systems that are becomming more popular with the [radio] public and too common used by un-authorized or un-licensed stations, I seek a [Step Backards] when the FCC regulated a bit better the multi-services radio sub parts of 47 CFR!

I suggest that if the "system" sold is "pre-programed" with the loaded authorized channels, and no more then it should be "Exempt" from this proposed rule making. The end user programing from both legal and illegal soft ware into his own radio system will be a hard thing to stop.

The FCC WTB a few years ago had about 1,200 radio intruders in one year! A few years back I worked with a local police department to help them recover a missing portable police radio, that later turned out to be the "prime" suspect of all the "smart remarks" that was from time to time was broadcast on there system. The radio was recovered, the radio jamming stopped, and the fellow who had it went off to "RE-HAB" at tax payers expense! OH...WELL...

It is not too un-common to see ad's for GMRS radio's, listed as +99 Channels, with remarks can be programed to police/fire/ems frequencys also. A fellow not to far away a few years programed his "Ham" [Amateur] radio to have police frequencys in it for his "Drive Time", however he got it stuck in "Cross Band" Repeat and the police calls were comming out on ham radio, and the ham radio was being broadcast over the police radio for several hours.

Change is need!

Thanks

Dale
